

CHECK-LIST OF THYSANOPTERA IN THE FORMER YUGOSLAVIA

LJ. ANDJUS

Natural History Museum, P.O. Box 401, YU-11000 Beograd

On the basis of a long-term research into the thrips fauna of south Balkan regions and a wealth of material collected, a new Check-list of thrips in the former Yugoslavia has been compiled. With regard to the previous Check-list by zur STRASSEN from 1984, the number of thrips species has increased by 33 in Serbia (from 65 to 98), and by 22 in Yugoslavia (from 137 to 159).

KEY WORDS: Thysanoptera, Check-list, Serbia, Yugoslavia.

The data on thrips in Serbia were first published by KAZAKOV (1927). Considerable time elapsed before the next contributions to our knowledge of these insects appeared (TODOROVSKI, 1965 and MORISON & TANASIJEVIĆ, 1966). It was followed by papers by GOJKOVIĆ (1971) and zur STRASSEN (1981). The last-mentioned author published a check-list of Thysanoptera of the then Yugoslavia which listed 137 species; at the same time, 65 thrips species were established in Serbia on the basis of the previously cited literature (zur STRASSEN, 1984).

In the ensuing period, beginning from 1986, the Natural History Museum in Belgrade initiated a new series of taxonomic and biogeographic investigations of Thysanoptera. The results of these studies were published, or presented at numerous conferences in Yugoslavia and abroad (JENSER & ANDJUS, 1987; ANDJUS, 1988/1989, 1989, 1989a, 1990; 1990a, ANDJUS & VUKOVIĆ 1991, ANDJUS, 1992, 1993, 1995, 1995a, 1996, ANDJUS Lj., & MILENKOVIĆ, 1996a, ANDJUS, 1997). In the course of these investigations, another 33 species were recorded in Serbia bringing the number of Thysanoptera species to 98, while their number in Yugoslavia increased from 137 to 159. These results were used as a basis for the new Check-list of Thysanoptera in the former Yugoslavia.

1. *Aeolothrips albicinctus* Haliday 1836
SLOVENIA: zur STRASSEN, 1981; zur STRASSEN, 1984;
SERBIA: KAZAKOV, 1927; zur STRASSEN, 1984; ANDJUS, 1996;
2. *Aeolothrips collaris* Priesner 1919
CROATIA: zur STRASSEN, 1984,
MONTENEGRO: zur STRASSEN, 1984;
MACEDONIA: zur STRASSEN, 1984
3. *Aeolothrips ericae* Bagnall 1920
SLOVENIA: zur STRASSEN, 1981; zur STRASSEN, 1984;
CROATIA: PRIESNER, 1919; zur STRASSEN, 1984;
SERBIA: ANDJUS, 1990a; ANDJUS, 1996;
MACEDONIA: zur STRASSEN, 1984;
4. *Aeolothrips fasciatus* (Linnaeus 1758)
SLOVENIA: MORISON & TANASIJEVIĆ, 1966; zur STRASSEN, 1984
CROATIA: KARNY, 1907; PRIESNER, 1919; MORISON & TANASIJEVIĆ, 1966; zur STRASSEN, 1984;
BOSNIA AND HERZEGOVINA: PRIESNER, 1919a; MORISON & TANASIJEVIĆ, 1966;

ЧЕК ЛИСТА THYSANOPTERA У НЕКАДАШЊОЈ ЈУГОСЛАВИЈИ

Љ. АНЂУС

И з в о д

Прве податке о трипсима у Србији публиковао је KAZAKOV (1927). Наредни прилози познавању ових инсеката појавили су се после дуже паузе (TODOROVSKI, 1965; MORISON & TANASJEVIĆ, 1966). Затим следе радови GOJKOVIĆ (1971) и zur STRASSEN-a (1981). Исти аутор 1984. године публикује Чек-листу Thysanoptera ондашње Југославије у којој је наведено 137 врста (zur STRASSEN, 1984). На основу напред цитиране литературе до тада у Србији је било забележено 65 врста Thysanoptera.

У наредном периоду од 1986. године у Природњачком музеју у Београду започета су нова и подробнија таксономско-биогеографска истраживања Thysanoptera. Резултати ових истраживања публиковани су или саопштени на више Скупова у земљи и иностранству (JENSER & ANDJUS, 1987; ANDJUS, 1988/1989; 1989; 1989a; 1990; 1990a; ANDJUS & VUKOVIĆ 1991; ANDJUS, 1992; 1993; 1995; 1995a; 1996; ANDJUS & MILENKOVIĆ, 1996a; ANDJUS 1997). Овим проучавањима утврђено је још 33 нове врсте за Србију, и сада фауна ових инсеката броји 98 врста. Истовремено, број познатих врста Thysanoptera у некадашњој Југославији се са 137 попео на 159 врста. На основу ових резултата урађена је ова нова Чек-листа Thysanoptera Југославије.
