

## THE FIRST FINDING OF *PHLOEOPHTHORUS BREVICOLLIS* KOLENATI (COLEOPTERA, SCOLYTIDAE) IN YUGOSLAVIA

Č. MARKOVIĆ<sup>1</sup> AND A. STOJANOVIĆ<sup>2</sup>

<sup>1</sup>Faculty of Forestry, Kneza Višeslava 1, YU-11000 Beograd

<sup>2</sup>Natural History Museum, Njegoševa 51, YU-11000 Beograd

In the research of fauna Scolitydae at the site Košutnjak in Belgrade DQ55 *Phloeophthorus brevicollis* Kolenati was found the first time for the fauna Scolytidae of Serbia and Yugoslavia. One male of this species was caught in the sweep net on May 4, 1997.

KEY WORDS: *Phloeophthorus brevicollis*, fauna, Yugoslavia

During the examination of fauna Scolytidae in Belgrade at the site Košutnjak DQ55 on May 4, 1997 one specimen *Ph. brevicollis* was caught in the sweep net. The specimen is deposited in Scolytidae collection at the Faculty of Forestry in Belgrade.

About the species *Ph. brevicollis* in literature there is not a lot of information. According to STARK, (1952), ENDRÖDI (1959) species was formerly recorded on Crimea, Caucasus and Hungary. Host of *Ph. brevicollis* is *Fagus orientalis* Lipsky (STARK, 1952).

Until now *Ph. brevicollis* has not been collected in Yugoslavia. By this researching the number of collected species Scolytidae in Serbia increased to 88 species from 33 Genus (MARKOVIĆ, STOJANOVIĆ, 1997a; 1997b; 1997c).

The finding *Ph. brevicollis* in Kosutnjak is the first finding in Yugoslavia. The research of this rare species will be continued.
